Embracing Life and Care in the Society and Social Sciences

Emiko Ochiai
Director, Kyoto University
Asian Studies Unit (KUASU)

The phrase “population ageing” may conjure up negative images, but it should be celebrated, instead. The dream of long life has finally been achieved by humanity. As the demographic transition is irreversible, aged societies, or super-aged societies, are the normal way for future human societies. We are taking on the challenge, one unprecedented in human history, of creating a social system appropriate for the “longevity revolution.”

Feminist economics expands the concept of economics to include reproduction. Without a carefully thought-out reconstruction of social systems to allow spreading reproduction costs among the three sectors of the economy, the state, and the family and appropriately redistributing labor, including both productive and reproductive labor, society itself will no longer be sustainable. This lecture intends to examine institutional reform, looking at what sort of social systems (or economies in the broader sense/welfare regimes) are being created following the transformation of the 20th century system, particularly focusing on human reproduction in a comparative perspective.

Round Table

Prof. Teppo Kröger (University of Jyväskylä),
Prof. Rajni Palriwala (Delhi University),
Prof. Barbara Hobson (Stockholm University)
